

JOBS' PORTAL

Many job seekers face challenges in accessing verified employment opportunities due to fragmented job information, fraudulent advertisements, and the absence of a centralized platform for local and international jobs. Existing job portals often allow unrestricted applications, leading to low-quality submissions and inefficient recruitment processes. The proposed **Jobs' Portal** addresses this gap by providing a secure, subscription-based platform where users can browse featured jobs, register, subscribe, select their preferred country, and apply for verified job opportunities through a streamlined and user-friendly application system.

System architecture.

Landing Page (Public)

Anyone can visit without logging in.

Hero Section

- "Find Verified Jobs Worldwide"
- Search bar
- Select Country
- Call-to-action: **Browse Jobs**

Featured Jobs

Display only a limited number (e.g., 12–20 jobs).

Each job card should show:

- Job title
- Company
- Country
- Salary (if available)
- Employment type
- Posted date
- "Apply Now" button

When a visitor clicks **Apply Now**, they are redirected to:

Register → Login → Payment → Application Dashboard

Registration

Users create an account using:

- Full name
- Email
- Phone number
- Password

Optional:

- Upload CV
- Upload Passport
- Upload Cover Letter

Login

Users log in using:

- Email
- Password

Subscription / Payment

Before applying, users must purchase a subscription.

Example plans:

Plan	Price	Benefits
Weekly	KES 500	Unlimited applications for 7 days
Monthly	KES 1,500	Unlimited applications for 30 days
Quarterly	KES 3,500	Unlimited applications for 90 days

Payment methods:

- M-Pesa
- Visa/Mastercard
- PayPal
- Stripe

After successful payment:

- Subscription becomes active.
- User is redirected to the dashboard.

User Dashboard

The dashboard should display:

Profile

- Personal information
- CV
- Passport
- Certificates

Job Search

Filters:

- Country
- Category
- Salary
- Experience
- Company

Country Selection

Allow users to choose jobs by country, such as:

- Kenya
- Uganda
- Tanzania
- Rwanda
- South Africa
- Canada
- USA
- UK
- Germany
- Australia
- New Zealand
- Qatar
- UAE
- Saudi Arabia

Job Details

Each job page should include:

- Job description

- Requirements
- Salary
- Company
- Location
- Closing date

If the user has not subscribed:

This job requires an active subscription.

Subscribe Now

Apply Process

Once subscribed:

Click **Apply**

The system:

- Sends the CV to the employer (if integrated with employer systems), or
- Records the application in your database for processing.

Application confirmation:

Your application has been submitted successfully.

Application Tracking

Users can monitor:

- Submitted
- Under Review
- Shortlisted
- Interview
- Accepted
- Rejected

Admin Panel

The administrator can:

- Add jobs
- Edit jobs
- Delete jobs

- Approve users
- Manage subscriptions
- Verify payments
- View applications
- Manage countries
- Manage employers
- Send notifications
- Generate reports

Revenue Opportunities

In addition to subscriptions, you could generate revenue through:

- Employer accounts that pay to post jobs.
- Premium CV review services.
- Professional cover letter writing.
- Visa guidance and relocation support.
- Interview coaching.
- Featured employer listings.
- Banner advertisements from recruitment agencies.

Recommended Tech Stack

- **Frontend:** React + Tailwind CSS
- **Backend:** Django + Django REST Framework
- **Database:** PostgreSQL
- **Authentication:** JWT
- **Payments:** M-Pesa (Daraja API), Stripe, PayPal
- **Storage:** Cloudinary or AWS S3 for CVs and documents
- **Deployment:** React on Vercel, Django on Render or Railway, PostgreSQL on Supabase or Neon

Future AI Features

To make the platform stand out, you could add:

- AI-powered CV analysis with personalized improvement suggestions.
- AI job matching based on skills, experience, and preferred countries.
- AI-generated cover letters tailored to each job.
- Interview preparation with likely questions and feedback.
- Job recommendations based on previous applications and profile strength.

This architecture gives you a scalable platform where users can browse jobs freely, but registration and payment are required before they can apply. It also leaves room to expand into a full international recruitment marketplace connecting job seekers, employers, and recruitment agencies.
