

PORTFOLIO / WORK SAMPLES – ELISHA KIDENGE

1. Kenya Climate Innovation & Heritage Hub (KCIHH)

A comprehensive Django-based web platform developed for a leading youth-led climate action organization in Kenya. The system bridges modern digital innovation with indigenous climate knowledge systems, enabling information sharing, engagement, and organizational coordination.

GitHub: https://github.com/eKidenge/kcihh_website

2. Pesaflow – Financial Workflow Management System

A full-featured financial management and payment workflow platform built with Django. It supports customer and organization management, automated payment processing (including M-Pesa integration), notifications, and analytics dashboards tailored for business operations in Kenya and beyond.

GitHub: <https://github.com/eKidenge/pesaflow>

3. Dropshipping E-Commerce Platform

A scalable Django-based e-commerce system designed for dropshipping businesses. It enables entrepreneurs to manage products, orders, customers, and transactions efficiently within a structured online marketplace environment.

GitHub: <https://github.com/eKidenge/dropshipping>

4. KACAF – Management Information System

A web-based Management Information System developed for the Kenya Association of Community Action Facilitators (KACAF). It supports membership management, governance workflows, programs, events, finance tracking, and communication systems within one centralized platform.

GitHub: <https://github.com/eKidenge/KACAF.git>

5. AI-Optimized Traffic Control Framework (Research Project)

A research-based system focusing on AI-driven optimization of urban traffic networks in Kenya. The project applies reinforcement learning, genetic algorithms, and simulation-based modeling to improve traffic signal efficiency, reduce congestion, and enhance fuel economy. Results show up to 28% reduction in wait times and 30% improvement in fuel efficiency.
